In 2025, the global production capacity of RF Absorber Sheet was approximately 15 million sqm.

RF Absorber Sheet is a functional electromagnetic material designed to absorb and reduce unwanted radio frequency electromagnetic waves within electronic systems. It is typically composed of magnetic materials, polymer substrates, and composite absorbing layers, providing electromagnetic interference suppression, signal integrity improvement, and noise reduction performance. The product is mainly used in smartphones, wireless communication equipment, automotive electronics, radar systems, consumer electronics, and high-frequency electronic devices. The product boundary includes finished RF absorbing sheets and customized absorbing films, excluding raw magnetic materials and complete electromagnetic shielding solutions.

The RF absorber sheet industry chain includes upstream suppliers of magnetic powders, polymer materials, conductive materials, adhesives, and composite materials; the midstream sector covers material formulation, coating, lamination, precision cutting, surface treatment, and performance testing; the downstream sector includes mobile devices, communication equipment, automotive electronics, radar systems, aerospace

electronics, and industrial electronic products. Market growth is driven by increasing wireless communication frequencies, electronic miniaturization, and rising electromagnetic compatibility requirements.

This report studies the global RF Absorber Sheet production, demand, key manufacturers, and key regions.
