According to our (Global Info Research) latest study, the global RF Capacitance Single Point Level Switches market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Capacitance type level switch is based on RF capacitance principle. Capacitance is formed between the level sensing probe and metallic wall of the vessel which act as two electrodes, and the application media acts as a dielectric medium when the sensor is introduced into the vessel. These electrodes are separated by an insulator by suitable media known as a dielectric medium. When the level of process material rises, the value of dielectric changes which results in change in the value of capacitance between the level sensing probe and the vessel wall. This change can be detected and measured by the Radio Frequency technique.

capacitive point level sensors are universally applicable in bulk solids, granulates, powders, liquids, highly viscous oils, slurries and pastes.
