The global RF Coaxial Radio Frequency Line market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

RF coaxial radio frequency line is a coaxial cable used for high-frequency signal transmission. It consists of an inner conductor, an insulating layer, an outer conductor and an outer sheath. The inner conductor and the outer conductor are separated by an insulating layer to form a coaxial structure. RF coaxial radio frequency lines can realize the transmission and shielding of high-frequency signals and have the advantages of low loss, low noise and high reliability. This kind of cable is widely used in radio frequency communications, satellite communications, microwave communications, radar systems, medical equipment, test instruments and other fields.
