The global RF Microwave Channel Board market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

A RF microwave channel plate is an electronic device used to detect and amplify signals from electrons, ions, vacuum ultraviolet, X-rays and gamma rays, also known as a microchannel plate (MCP). It consists of millions of tiny electron multiplier tubes, each of which has a high voltage difference. When incident particles or photons hit the tube wall, secondary electrons are generated, thereby amplifying and converting the signal. RF microwave channel plates have the advantages of high gain, high resolution, fast response, low noise, etc., and are widely used in physics, chemistry, biology, medicine, astronomy and other fields.
