The global RF and Microwave Design Software market size is expected to reach \$ 2561 million by 2032, rising at a market growth of 8.8% CAGR during the forecast period (2026-2032).

RF and Microwave Design involve the complex process of developing systems, components, and devices that use radio frequency signals to operate.

The market demand for RF and microwave design software continues to grow, primarily driven by multiple factors, including the accelerated deployment of 5G/6G communications, the widespread application of millimeter-wave and terahertz technologies in radar and satellite communications, the increasing accuracy requirements for high-frequency circuit modeling at advanced semiconductor process nodes, the intensified challenges of multi-physics coupling brought about by the miniaturization and high integration of wireless devices, and the global supply chain security-driven strategy promoting the independent control of domestic EDA tools. Meanwhile, the rise of AI-assisted simulation, cloud platform collaborative design, and system-level verification has further expanded the application depth and market space of high-end RF design software.
