## **Abstracts**

According to our (Global Info Research) latest study, the global RF Over Fiber Link market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

RF Over Fiber Link transmits both analog and digital RF signals. It converts an input electrical RF signal into an optical signal via a high linearity DFB laser (transmitter) and re-converts the optical signal back into the RF signal at the other end of the fiber link via a high linearity photodiode and low noise amplifier (receiver). The transmitter and receiver pair forms a transceiver that provides transparent data transmission channel.
