Abstracts

RF-over-Fiber is a technology that describes the conversion of a Radio Frequency (RF) signal into a Fiber Optic (FO) signal and then back to an RF signal. In RF-over-Fiber architecture, a data-carrying RF (Radio Frequency) signal with a high frequency (usually greater than 10 GHz) is imposed on a lightwave signal before being transported over the optical link. Therefore, wireless signals are optically distributed to base stations directly at high frequencies and converted from the optical to electrical domain at the base stations before being amplified and radiated by an antenna. As a result, no frequency up/down conversion is required at the various base stations, thereby resulting in simple and rather cost-effective implementation is enabled at the base stations.

According to our (Global Info Research) latest study, the global RF-over-Fiber (RFoF) market size was valued at US\$ 500 million in 2023 and is forecast to a readjusted size of USD 1288 million by 2030 with a CAGR of 14.6% during review period.

The key brand include Finisar, HUBER + SUHNER, Emcore, APIC Corporation, Syntronics LLC, DEV Systemtechnik, Foxcom, ViaLite, RF Optic, Optical Zonu, Pharad, Fibertower, Intelibs and so on.
