Abstracts

The RFID attendance system is an attendance management system based on Radio Frequency Identification (RFID) technology. It uses wireless signal transmission between RFID tags and readers to achieve rapid identification of employee identities and access control. When taking attendance, employees only need to carry a card or device with an RFID tag and bring it close to the reader to complete the attendance operation. There is no need to manually enter information, which greatly improves the efficiency and accuracy of attendance.

According to our (Global Info Research) latest study, the global RFID Attendance System market size was valued at US\$ million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of %during review period.

The RFID attendance system will achieve higher identification accuracy and speed. With the continuous advancement of RFID technology, the reading distance, reading and writing speed and recognition accuracy of tags will be significantly improved. This will make the attendance system more efficient, reduce misreadings and missed readings, and improve the accuracy of attendance data.
