According to our (Global Info Research) latest study, the global RFID Blood Monitoring Systems market size was valued at USD 102.6 million in 2023 and is forecast to a readjusted size of USD 298.9 million by 2030 with a CAGR of 16.5% during review period.

RFID blood monitoring systems are used in healthcare facilities for proper and accurate tracking of blood and blood products. These devices are widely used owing to their ability to communicate and send information over a distance as compared to other tracking systems that need proper line of sight for information transfer. RFID tags contain electronically stored information of products they are attached to, and can be used for tracking objects. Moreover, as blood and blood products need proper monitoring so as to avoid any consequences from inaccurate administration in patients, these systems are being increasingly adopted in healthcare facilities across the globe.

According to our research, the global market for medical devices is estimated at US\$ 603 billion in the year 2023, and will be growing at a CAGR of 5% during next six years.
