## Abstracts

According to our (Global Info Research) latest study, the global RFID Books Management Solution market size was valued at US\$ 2628 million in 2025 and is forecast to a readjusted size of US\$ 4201 million by 2032 with a CAGR of 6.9% during review period.

RFID library management solutions are systems that utilize radio frequency identification (RFID) technology for intelligent management of library resources. At its core, RFID electronic tags are affixed to each book, replacing traditional barcodes. Through RFID readers and antennas, rapid batch identification, location, and data collection of books can be achieved without direct visual scanning. This system is deeply integrated with the library's integrated management system, comprehensively covering core business processes such as self-service borrowing and returning, inventory management, book sorting, anti-theft monitoring, and in-library location navigation. It fundamentally revolutionizes the book circulation model, significantly improving borrowing and returning efficiency and inventory accuracy, optimizing the self-service experience for readers, and greatly reducing the repetitive workload of librarians. It is a key infrastructure for the digital and automated transformation of modern libraries.

RFID library management solutions have a promising future, and their development is evolving from an automation tool to the core data engine of smart libraries. The future driving forces mainly come from three aspects: First, deep intelligence, which, through integration with the Internet of Things, big data analytics, and artificial intelligence technologies, enables personalized recommendations based on reader behavior, precise and intelligent book inventory, and dynamic optimization management of book

collections; second, seamless experience, integrating facial recognition, contactless borrowing and returning channels, and indoor navigation systems to create an immersive 'grab and go' borrowing experience; and third, expanded service boundaries, utilizing high-frequency and ultra-high-frequency RFID technologies to achieve full lifecycle management of various assets such as ancient books, CDs, and equipment, and supporting the dense deployment and efficient operation and maintenance of self-service library networks in urban blocks. Driven by smart city and national reading policies, this solution will become a standard configuration for improving the efficiency and quality of public cultural services.
