## Abstracts

The global RFID EAS Detection System market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

RFID EAS (Radio Frequency Identification Electronic Article Surveillance) Detection System is a security system used to prevent theft in retail stores or libraries. It combines RFID technology with Electronic Article Surveillance (EAS) technology to track and protect items from being stolen. The system consists of RFID tags attached to the items, RFID readers placed at store exits or library exits, and an EAS detection system. The RFID tags contain unique identification information and can be detected by the RFID readers. The EAS detection system consists of antennas that create a detection field or gate at the exit points. When a tagged item passes through the detection field, the RFID reader reads the tag's information and sends it to the EAS detection system. If the item is not properly deactivated or authorized, an alarm is triggered, alerting the store or library staff to a potential theft. RFID EAS Detection Systems provide several benefits, such as improved inventory management, reduced theft, enhanced customer experience, and increased operational efficiency. They enable real-time tracking of items, automate the checkout process, and deter shoplifting.

This report studies the global RFID EAS Detection System production, demand, key manufacturers, and key regions.
