Abstracts

According to our (Global Info Research) latest study, the global RFID Inlays market size was valued at US\$ 2917 million in 2024 and is forecast to a readjusted size of USD 5588 million by 2031 with a CAGR of 9.8% during review period.

An inlay is consist of an antenna and a contactless-enabled microchip, inlay are the neurons of the RIFD brain. It typically consists of an integrated circuit (IC) connected to an antenna.

The antenna drives tag performance and governs how well the tag will work in a particular application. Precision-designed to receive and broadcast RF signals, the antenna is made from a conductive material (such as silver, copper). The antenna makes contact with an RF reader over a distance determined in large part by the amount of metal and size of the antenna.

Contacts attached to the microchip make the circuit between the microchip and antenna. The chip design determines the protocol or class of the tag's operation. Different microchips have different features that can also affect performance. RFID microchips contain circuitry capable of handling a variety of functions from power conversion to data storage and retrieval.

In this report, we only count passive RFID Inlays. They do not have a built-in power source and rely on the energy transmitted from RFID readers to operate. Passive tags are suitable for applications where cost is a significant consideration.

The RFID inlays market highly driven by increasing demand from various end-use verticals including retail, financial services, healthcare, government and transportation &

logistics among others for longer detection range. The driver of UHF inlays is mainly due to the reduction of product prices and the continuous expansion of the application field. T However, the price of UHF inlay systems is still high due to the overall cost of chips.

North America and Europe are leading the market in terms of adoption and innovation, while Asia-Pacific is emerging as a key growth region due to the rapid industrialization and increasing implementation of RFID technology in manufacturing and logistics. The North America market for RFID Inlays is estimated to increase from \$ 0.39 billion in 2024 to reach \$ 0.64 billion by 2030, at a CAGR of 8.64% during the forecast period of 2024 through 2030. The China market for RFID Inlays is estimated to increase from \$ 1.55 billion in 2024 to reach \$ 3.10 billion by 2030, at a CAGR of 12.20% during the forecast period of 2024 through 2030. The Europe market for RFID Inlays is estimated to increase from \$ 0.26 billion in 2024 to reach \$ 0.38 billion by 2030, at a CAGR of 6.69% during the forecast period of 2024 through 2030.

The global key manufacturers of RFID Inlays include Avery Dennison, SML Group, Trimco Group, Checkpoint Systems, Beontag, Arizon, XINDECO IOT, Tageos, SATO, INLAYLINK, Zebra, NAXIS, Hangzhou Century, Talkin' Things and Hana Technologies etc. In 2023, the global top five players had a share approximately 36.0% in terms of revenue. The RFID inlay market is becoming increasingly competitive, with both established players and new entrants vying for market share. This competition is driving innovation and leading to more cost-effective solutions. The market is seeing consolidation through mergers and acquisitions as companies seek to expand their product portfolios, enter new markets, and strengthen their technological capabilities.

Despite the positive growth trajectory, the market faces several challenges, including cost considerations, implementation complexity, and concerns around data security and privacy. However, these challenges also present opportunities for innovation, particularly in developing cost-effective, user-friendly, and secure RFID solutions. The integration of RFID with emerging technologies like IoT, AI, and blockchain is expected to further expand the scope and capabilities of RFID systems.
