RFID inventory management system, the full name of radio frequency identification inventory management system, is an inventory management solution that applies radio frequency identification technology (RFID). It achieves real-time monitoring, tracking and management of inventory by embedding RFID tags on products, items or packages, and using RFID readers to read and identify tag information.

According to our (Global Info Research) latest study, the global RFID Inventory Management System market size was valued at US\$ million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of %during review period.

The future RFID inventory management system will be more integrated and seamlessly connect with other enterprise information systems (such as ERP, SCM, etc.) to achieve data sharing and collaborative work. In addition, with the help of artificial intelligence and machine learning technology, the system can achieve smarter inventory forecasts, optimize inventory structure, and reduce inventory costs.
