Abstracts

The RFID laundry management system is a laundry management solution based on radio frequency identification (RFID) technology. It achieves automatic identification, tracking and management of clothing by attaching RFID tags to each piece of clothing and using RFID readers to read the information on these tags. This kind of system can greatly improve the efficiency and accuracy of the laundry process, reduce human errors, and provide real-time and accurate laundry progress and data.

According to our (Global Info Research) latest study, the global RFID Laundry Management System market size was valued at US$ million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of %during review period.

With the continuous advancement of RFID technology, the reading speed, accuracy and stability of tags will be further improved, while the cost will also gradually decrease. This will make RFID laundry management systems more popular, and more laundry places may adopt this technology.
