Abstracts

The global RFID Library Solution market size is expected to reach \$ 2892 million by 2032, rising at a market growth of 5.6% CAGR during the forecast period (2026-2032). An RFID library solution uses tiny electronic tags on books for automated tracking, self-checkout, security, and inventory, replacing traditional barcodes to boost efficiency, reduce staff workload, enhance user experience with faster service, and improve collection security through instant identification and anti-theft gates. These systems enable features like rapid inventory scans, automated returns, and real-time stock updates, freeing up staff for more complex patron assistance.

RFID (Radio-Frequency Identification) library solutions represent a specialized segment of the broader RFID and library automation markets, focusing on the digital transformation of library operations through smart technology. This market encompasses RFID tags, readers, self-service kiosks, security gates, inventory management systems, and integrated software platforms. The global market is experiencing steady growth driven by libraries' digital transformation initiatives, the need for operational efficiency, enhanced user experiences, and integration with broader smart city and educational technology ecosystems. Despite budget constraints in public institutions, RFID adoption continues as libraries modernize to remain relevant in the digital age.
