Abstracts

According to our (Global Info Research) latest study, the global RFID Reader Module market size was valued at US\$ 15090 million in 2024 and is forecast to a readjusted size of USD 27210 million by 2031 with a CAGR of 8.9% during review period.

The RFID reader module is a non-finished product that requires memory, power supply, antenna, processor and housing, ranging in frequency from 125 kHz to 960 MHz. Interfaces include Bluetooth, Ethernet, I2C, RS232, RS422, RS485, TTL, UART or USB.

??

??

An RFID reader can scan a tag if it is within the frequency range. It doesn't have any line of sight restrictions. Alternative ID solutions, such as barcodes, require the reader to be in close proximity to the barcode to see and scan the product. RFID systems can automatically read tag IDs from a distance and through obstacles between the tag and the reader. In addition, uncertain environmental changes will not affect the operation of RFID sensors. Hence, the rise in the development of high tolerance and operational stability is expected to significantly drive the future growth of the global market.
