Abstracts

RFID technology uses the electromagnetic signature that accompanies the radio frequency in a specific spectrum to communicate information, which is mostly one way. This process is carried out by the RFID microchip. The reader reads the information from RFID tags, and RFID middleware uses the data to create analytical insights. RFID technology uses the electromagnetic signature that accompanies the radio frequency in a specific spectrum to communicate information, which is mostly one way. This process is carried out by RFID microchip (RFID tag), RFID reader, and RFID middleware components.
