According to our (Global Info Research) latest study, the global RFID Tags for Livestock Management market size was valued at USD 1847.4 million in 2023 and is forecast to a readjusted size of USD 3073.2 million by 2030 with a CAGR of 7.5% during review period.

RFID has already been used for years in some aspects of the agriculture industry. Tagging of animals like sheep and cows allows the farmer to have superior traceability, better breeding control, better conservation efforts and of course, data collection about each and every animal of the herd. RFID can also play a major role with automated feeding, weighing and disease management of the animals, all with a simple tag, in addition to tracking capabilities of a lost animal and return to its rightful owner.

Sheep and goat farming, hog and pig farming, equine facilities, poultry and egg production centers, dairy cattle ranching, beef steer ranching, and aquaculture are all areas of the agriculture industry that sees many benefits from RFID applications.

This is owing to strong governmental support to farmers to adopt smart agriculture practices and boost the agricultural produce.
