RFID technology is a market standard technology used for identification. RFID means Radio Frequency Identification: it is a passive electronic chipset that can exchange data with a reader using Radio Frequency (RF) signals. RFID tags embedded in tires ensure reliable tire identification and enable to build data driven services & solutions: it is a key pillar of connected mobility!

Tire tags are also a kind of RFID electronic tags, which are used to record data and are used in conjunction with RFID readers. They are generally passive. In the United States, some European countries, Japan, South Korea and other places, legal provisions on RFID electronic tags for tires have been issued. The provision stipulates that tires must be affixed with electronic labels, so that the tires can be checked through some attribute information during the production process to see whether the produced tires meet the national standards.
