## Abstracts

The global RGB LED Video Light market size is expected to reach \$ 168 million by 2032, rising at a market growth of 5.0% CAGR during the forecast period (2026-2032). In 2025, global RGB LED Video Light production reached approximately 512 K Units .An RGB LED Video Light is a professional video lighting device that uses red, green, and blue light-emitting diodes (LEDs) as its light source. Its core function is to precisely mix hundreds of thousands of colors on a color wheel by mixing different intensities of these three primary colors, and to finely adjust color temperature and saturation. It not only supports pure white light illumination with high color rendering index (CRI/TLCI), but also provides a rich variety of colored lights and dynamic lighting effects (such as flashing and gradations) to meet diverse needs such as creative lighting, atmosphere creation, and color matching. This device is widely used in film and television production, live streaming, portrait photography, and special visual effects creation. It features low energy consumption, long lifespan, precise control, and high portability, making it one of the key tools in modern digital image production.RGB LED Video Lights significantly reduce the barriers to entry and equipment costs for professional film and content creation by offering multiple functions (full color, color temperature adjustment, and special effects), solving the core pain points of traditional lighting systems, such as being expensive, bulky, complex in lighting setup, and lacking creative flexibility. The global price range for RGB LED video lights is wide, with entry-level portable models ranging from approximately \$20 to \$100, professional-grade products from \$200 to \$800, and high-end cinematic-grade products exceeding \$1000. The core costs lie in the LED chips (especially high color rendering/full-color models), driver power supply, heat dissipation structure, and main control chip. Brand value, channel distribution, and marketing costs also account for a significant proportion. The industry average gross profit margin is typically between 30% and 50%, with higher profit margins for high-end and branded products, while the low-price market is highly competitive and has thinner

profit margins.

Key upstream links in the RGB LED Video Light industry chain include: LED chips and LED beads (such as CREE in the US and Sanan Optoelectronics in China), driver ICs and control systems (such as Texas Instruments), heat dissipation modules, and manufacturers of optical lenses and structural components. Downstream core applications cover professional film and television production, commercial live streaming, personal content creation, and stage performances. Its downstream customers are diverse; a specific example is the original production teams of major streaming platforms (such as Netflix and Disney+), who purchase or lease high-end RGB LED lights for on-set lighting to achieve cinematic image quality, create complex color atmospheres, and meet the demands of energy-efficient shooting.
