Abstracts

According to our (Global Info Research) latest study, the global RGD Peptide market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

RGD peptide is a binding motif of fibronectin to cell adhesion molecules. RGD peptide acts as an inhibitor of integrin-ligand interactions and can induce apoptosis in the absence of signals and integrin-mediated cell aggregation. Studies have shown that RGD peptide promotes apoptosis by activating conformational changes, thereby enhancing the activation and self-processing of pro-caspase-3. RGD peptide can serve as a cell adhesion site for the extracellular matrix, cell surface proteins, and integrins. In addition, RGD peptide can inhibit the activation of ACK-2 through cell adhesion.
