## Abstracts

The global Rheology Modifiers market size is expected to reach \$ 7429 million by 2032, rising at a market growth of 3.3% CAGR during the forecast period (2026-2032).

Rheology modifiers, commonly referred to as thickeners or viscosifiers, are ever-present in most products to provide specific functionality to the product. Rheological modifiers are the key components in paints and coatings as they reduce dripping and spattering of fluid during roller or brush application. It provides high viscosity at low shear rates that is useful during drilling high-angle and horizontal wells and it also prevents sag and settling of weighting material. Rheology modifiers prevent sedimentation of pigments within a formulation and ensure consistency and durability of the fluid.

Global Rheology Modifiers key players include BYK Additives and Instruments, BASF, DOW, Evonik, Lubrizol, etc. Global top five players hold a share about 30%.

China is the largest market, with a share about 30%, followed by Europe and North America, having a total share about 40 percent.
