## Abstracts

Rice Husk Carbonization Machine is a device used to carbonize rice husk. The Rice Husk Carbonization Machine converts rice husk into carbonized material, namely rice husk charcoal, by treating it in a high temperature and oxygen-free environment. This carbonization process can remove moisture and impurities from rice husk, making it a biomass fuel with high carbon fixation rate and calorific value. Rice Husk Carbonization Machines usually adopt environmentally friendly, efficient and energy-saving processes, which can realize the resource utilization of rice husk, reduce waste emissions, and at the same time contribute to environmental protection and ecological sustainable development.
