A lawn mower is a machine utilizing one or more revolving blades to cut a grass surface to an even height. The height of the cut grass may be fixed by the design of the mower, but generally is adjustable by the operator, typically by a single master lever, or by a lever or nut and bolt on each of the machine's wheels. The blades may be powered by muscle, with wheels mechanically connected to the cutting blades so that when the mower is pushed forward, the blades spin, or the machine may have a battery-powered or plug-in electric motor.

A ride-on lawn mower is a type of lawn mower on which the operator is seated, unlike mowers which are pushed or towed. Ride-on lawn mowers, which sometimes resemble small tractors, are larger than push mowers and are suitable for large lawns. The machine is designed to be easy and comfortable to use and is designed to mow large areas at high speed in the shortest time possible. Ride-on lawn mowers can get the job done so much quicker than with a push or self-propelled option.
