Abstracts

According to our (Global Info Research) latest study, the global Rideshare App market size was valued at US\$ 14441 million in 2025 and is forecast to a readjusted size of US\$ 25434 million by 2032 with a CAGR of 8.4% during review period.

A rideshare app connects passengers with nearby drivers for on-demand, app-based transportation, using GPS for matching, tracking, and cashless payments, with players offering various services from basic rides to food delivery, carpooling, and even scooters. These platforms revolutionized urban mobility by offering convenience, upfront pricing, and flexible earning for drivers, though debates continue regarding driver classification and regulation.

The rideshare market is entering its second act?moving from growth-at-all-costs to sustainable mobility ecosystems. Winners will be determined by: Execution on profitability while maintaining service quality; Successful diversification beyond core ride-hailing; Navigation of regulatory complexity across diverse markets; Strategic positioning for the AV transition; Superior localization** in high-growth emerging markets.

The industry faces consolidation pressure in mature markets while fragmentation persists in emerging regions. The ultimate prize is becoming the operating system for urban mobility?a role currently contested by rideshare platforms, automakers, tech giants, and possibly new entrants yet to emerge.
