Abstracts

According to our (Global Info Research) latest study, the global Riding Mower market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

A riding mower is a type of lawn mower on which the operator is seated, unlike mowers which are pushed or towed.

Riding mowers, which sometimes resemble small tractors, are larger than push mowers and are suitable for large lawns, although commercial riding lawn mowers (such as zero-turn mowers) can be 'stand-on' types, and often bear little resemblance to residential lawn tractors, being designed to mow large areas at high speed in the shortest time possible. The largest multi-gang (multi-blade) mowers are mounted on tractors and are designed for large expanses of grass such as golf courses and municipal parks, although they are ill suited for complex terrain requiring maneuverability.

In United States, Riding Mower key players include Husqvarna, MTD, John Deere, Craftsman, etc. Global top four manufacturers hold a share over 40%.

South is the largest market, with a share over 30%, followed by Midwest, and North, both have a share about 45 percent.

In terms of product, Gasoline is the largest segment, with a share nearly 80%. And in terms of application, the largest application is Residential, followed by Commercial.
