The global Rigid Fiber Mammary Ductoscopy market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Rigid fiberoptic mammary duct endoscope is composed of light source, image monitor, camera recorder, and fiberoptic scope. Endoscopic equipment helps to detect early lesions in the milk ducts. It is of epoch-making significance for the qualitative and localized treatment of small lesions in the milk duct with bloody or serous nipple discharge and no lumps in the breast. At present, this method has replaced mammary ductography and is the first choice for the diagnosis of nipple discharge etiology. It has the advantages of convenient operation and less trauma.
