Abstracts

The global Rigid-Flex PCBs (RFPC) market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Rigid-Flex PCBs (RFPC) combine the technologies of flexible and rigid boards. They typically consist of a multilayer flexible circuit substrate connected externally or internally to one or more rigid boards, depending on the design requirements of the application. Flexible substrates are designed to bend continuously, and curves are often formed during production or installation. The circuits of the hard board part and the flex board part are interconnected through plated through holes. Rigid-flex circuits offer higher component density and better quality control. The design is rigid and requires additional support and corners and areas that require extra space. The hard board and soft board go through a lamination process and are combined according to relevant process requirements to form a circuit board with the characteristics of FPC soft board and hard board PCB.

This report studies the global Rigid-Flex PCBs (RFPC) production, demand, key manufacturers, and key regions.
