According to our (Global Info Research) latest study, the global Ring Internal Combustion Engine market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

A ring motor is one that eliminates the mechanical components of a conventional mill drive. By mounting the rotor poles directly onto the mill, the mill becomes the rotor of a gearless motor. These large synchronous machines, also known as wrap-around or ring motors, are speed controlled by power electronics and magnetic fields. By eliminating the need for mechanical contact between the static and dynamic parts, gearless mill drives save a lot of energy and components and are more reliable.
