Abstracts

The global Ring Internal Combustion Engine market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

A ring motor is one that eliminates the mechanical components of a conventional mill drive. By mounting the rotor poles directly onto the mill, the mill becomes the rotor of a gearless motor. These large synchronous machines, also known as wrap-around or ring motors, are speed controlled by power electronics and magnetic fields. By eliminating the need for mechanical contact between the static and dynamic parts, gearless mill drives save a lot of energy and components and are more reliable.

This report studies the global Ring Internal Combustion Engine production, demand, key manufacturers, and key regions.
