Abstracts

According to our (Global Info Research) latest study, the global Ring Laser Gyroscope market size was valued at US\$ 795 million in 2024 and is forecast to a readjusted size of USD 967 million by 2031 with a CAGR of 2.9% during review period.

A ring laser gyroscope (RLG) consists of a ring laser having two independent counter-propagating resonant modes over the same path; the difference in the frequencies is used to detect rotation. It operates on the principle of the Sagnac effect which shifts the nulls of the internal standing wave pattern in response to angular rotation. Interference between the counter-propagating beams, observed externally, results in motion of the standing wave pattern, and thus indicates rotation.

In the Chinese market, major manufacturers include Honeywell, Safran(Sagem), Northrop Grumman, Aerosun, Polyus, Avic and Beifang Jierui.
