Rising stem hard seal gate valve is a valve commonly used in fluid pipeline systems, mainly used to control the flow of fluid. Different from soft seal gate valve, rising stem hard seal gate valve uses hard materials (such as steel, cast iron, etc.) as valve sealing surface, and the valve stem is exposed (i.e. 'rising stem' design). This design makes it have strong resistance to high pressure and high temperature, and is suitable for application environments that require stronger mechanical strength and higher durability.
