The global Risk Intelligence Software market size is expected to reach \$ 326 million by 2032, rising at a market growth of 3.5% CAGR during the forecast period (2026-2032).

Risk Intelligence Software (RIS) refers to a set of technological tools designed to help organizations identify, assess, manage, and mitigate risks associated with their operations, projects, or investments. This software typically provides features for data analysis, risk reporting, and decision-making support to enhance an organization's overall risk management strategies.

The current risk intelligence software market is experiencing rapid growth and transformation. Enterprises and government agencies are increasingly emphasizing the use of real-time, high-quality threat intelligence to enhance early warning capabilities, attack surface coverage, and response speed. The market is shifting from intelligence tools based on single data sources to multi-source fusion, automated intelligence, and contextualized analysis, stressing deep integration with Security Operations Centers (SOCs), threat hunting, Endpoint Detection and Response (EDR), and cloud security architectures. Cloud-native, API-driven intelligence platforms, scalable observability, and intelligence credibility, operability, and compliance are becoming key competitive advantages. Meanwhile, service providers are offering end-to-end solutions from intelligence gathering, analysis, and automated processing to an intelligence sharing ecosystem, driving the development of cross-industry collaborative defense and threat intelligence sharing standards.
