## Abstracts

The global RJ45 Pass-Through Connector market size is expected to reach \$ 739 million by 2032, rising at a market growth of 4.5% CAGR during the forecast period (2026-2032).

An RJ45 pass-through connector is a specialized Ethernet plug featuring open-ended channels that allow all eight individual wire conductors to pass completely through the connector body. This design simplifies cable termination by permitting easy, visual confirmation of the correct T568A/B wiring order before crimping, resulting in faster installation and more reliable, secure connections compared to traditional, closed-end connectors.

The global production of RJ45 straight connectors is projected to reach 160 million units by 2025, with an average price of \$3.3 per unit.

Upstream of RJ45 pass-through connectors mainly includes copper and copper alloy materials, phosphor bronze terminals, gold or nickel plating materials, engineering plastics, and packaging supplies. Downstream applications cover network cabling projects, data centers, enterprise and home networking equipment, security systems, industrial Ethernet, and communication device manufacturing. Downstream customers focus on installation efficiency, termination success rate, transmission stability, and compatibility with high-speed Ethernet standards, while system integrators and equipment manufacturers emphasize consistency and bulk supply capability. Industry trends point toward higher-speed and standardized products, with growing demand for Cat6A and above, along with fast termination, low insertion loss, and crosstalk control. Key drivers include expansion of data centers and cloud infrastructure, enterprise network upgrades, adoption of smart buildings and industrial Ethernet, and increasing demand for labor cost reduction and installation efficiency. Constraints mainly arise from high product commoditization, intense price competition, higher precision requirements for high-speed standards, and partial substitution by wireless networking solutions.

Overall gross margins of RJ45 pass-through connectors are relatively limited, typically ranging from 15% to 30%. Manufacturers with automated production, strong quality control, and brand or channel advantages achieve higher margins, while suppliers focused on standardized low-end products face greater margin pressure from raw material costs and competition.

This report studies the global RJ45 Pass-Through Connector production, demand, key manufacturers, and key regions.
