Abstracts

The global RNA Pesticide market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

RNA pesticide is an exogenous interfering RNA preparation, where a double-stranded RNA molecule (dsRNA) enters the pest through a certain way. By interfering with the transcription and translation process of the gene related to the growth and development of the pest, the pest-related gene is silenced, preventing the synthesis of protein leads to the reduction of the environmental adaptability or death of pests.

This report studies the global RNA Pesticide production, demand, key manufacturers, and key regions.
