The global Road Asset Management Systems (RAMS) market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Road Asset Management Systems (RAMS) refer to a set of tools and techniques used to manage and maintain the physical assets of roads, such as pavements, bridges, and signs. The goal of RAMS is to optimize the lifecycle of these assets while minimizing costs and maximizing safety and efficiency for road users.

RAMS typically involve a combination of data collection, analysis, and decision-making processes. Data collection methods may include field surveys, remote sensing technologies, and crowdsourcing platforms. Data analysis may involve predictive modeling, risk assessment, and performance evaluation. Decision-making processes may involve prioritizing maintenance and repair activities, determining optimal asset replacement schedules, and assessing the long-term financial sustainability of road management strategies.

RAMS are increasingly being adopted by transportation agencies and road authorities around the world as a way to improve the safety, reliability, and sustainability of road networks.
