According to our (Global Info Research) latest study, the global Road Condition Detection System market size was valued at USD 858.1 million in 2022 and is forecast to a readjusted size of USD 1080.7 million by 2029 with a CAGR of 3.3% during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

In the future, the test and testing industry will gradually enter the market, and the competition situation will become increasingly severe. Therefore, thinking should be changed in time to improve service awareness, and testing and testing institutions should also use various means to urge practitioners to improve their technical level and improve their work attitudes. Leaders should take responsibility to promote and allocate personnel with strong technical ability and management ability to suitable management positions, create promotion opportunities for young people, absorb advanced management experience of enterprise units, and create a unique corporate culture. The most important thing is that we must change the service method, improve the initiative of service, actively contact customers, improve service quality, and ensure the authenticity of testing.

The continuous improvement of the industry mechanism and management system has laid the foundation for the future development of the testing and testing industry. As for the testing agency itself, it is necessary to adopt a scientific management system, strengthen the performance appraisal mechanism, implement and clarify rights and responsibilities, and integrate the benefits of the organization with the employees. Linking wages and salaries to performance, highlighting the correlation between employees' personal working ability, efficiency and income, opening up promotion

channels, and creating a set of effective management systems that are in line with the actual test and inspection work are the main ways to improve employees' work enthusiasm and strengthen Key to overall institutional cohesion and creativity.

At this stage, the scale of domestic highway engineering construction continues to expand, and the test and inspection industry has a high degree of market demand. However, problems such as lack of service awareness, insufficient introduction of talents and technologies, and unreasonable personnel structure have become important factors that plague the development of the industry. The update of the model will become the main trend of the development of the industry.

The pavement damage detection system uses the vehicle-mounted CCD camera to take photos of the pavement and stores it as digital image data, and then determines the type and quantity of pavement damage through manual interpretation or machine identification, and stores the results in the database, and combines the global satellite positioning system. the exact location of the disease'.
