## Abstracts

The global Road Graders market size is expected to reach \$ 1479 million by 2032, rising at a market growth of 2.3% CAGR during the forecast period (2026-2032).

The road grader is a high-speed, efficient, high-precision and multi-purpose earth-moving machinery. It can complete the tasks of leveling and ditching, scraping slopes, bulldozing, snow removal, loosening, compacting, spreading, mixing, assisting loading and land reclamation in large areas such as important highway fields and farmlands. It is an important equipment in the construction of national defense projects, mining construction, road construction, water conservancy construction and farmland improvement.

During the past few years, government spending on infrastructure and construction activities has been on the rise globally, especially in developing nations like India and China. The compact design of the road grader is highly suitable for small to medium road projects in villages and cities, making it the most preferred choice of contractors for road projects like Pradhan Mantri Gram Sadak Yojna (PMGSY) schemes in developing countries like India. For the mining industry, the countries rich in mineral reservoirs are increasing their spending to meet the local and global demand. For instance, in New South Wales, Australia, the funding will be worth USD 705.3 million. The Federal government is pledging a further USD 1.06 billion for works in Western Australia and USD 37.4 million for the Northern Territory. The Australian Capital Territory will also receive USD 24.7 million for road development. This investment into the development of road infrastructure across the country is expected to boost the demand for road graders in Australia.

This report studies the global Road Graders production, demand, key manufacturers,

and key regions.

This report is a detailed and comprehensive analysis of the world market for Road Graders and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2025 as the base year.
