The global Road Repair Cold Asphalt market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

High demand is boosting the growth of the global market. However, upstream raw material supply and price fluctuations are factors hindering market growth. Furthermore, technological advancements are expected to provide growth opportunities during the forecast period.

Road Repair Cold Asphalt, was first recognized as a way to make road repairs quickly because it can be applied right from the container without heating. Cold asphalt also doesn't require any special heavy rolling machines or special applicators as it can be shoveled or poured into a pothole or utility cut and tamped down with a hand tool. Cold asphalt is not dependent upon warm weather. Highway repair crews like cold asphalt because it retains its pliable properties when the temperature drops, so it can be used in northern climates well into the fall and even early winter months. Municipal road crews can make more repairs in a single season because they do not have to maintain this asphalt product at a predetermined temperature to work with it – because it's cold asphalt.
