Abstracts

ROADM networks inability to maintain a typical noise shape result in inaccurate optical signal-to-noise ratio (OSNR) measurements. ROADM WSS components are widely classified into Blocker-based, Edge, PLC-based, and Wavelength Selective Switches (WSS).

SCOPE OF THE REPORT:

The key factor contributing to growth of ROADM WSS component market is the growing demand for dynamic ROADMs. Global market is also experiencing an upsurge in the demand for adoption of wavelength selective switches (WSS) enabled ROADMs. However, product cost and quality are some of the major challenges faced by this industry that can hinder its growth rate. Growth of WSS market slowed down during past few months as a result of excessive supply chain inventory; however, this market is expected to resume growth in the near future as a result of surging demand for technologically improved components.

The global ROADM WSS Component market is valued at xx million USD in 2017 and is expected to reach xx million USD by the end of 2023, growing at a CAGR of xx% between 2017 and 2023.

The Asia-Pacific will occupy for more market share in following years, especially in China, also fast growing India and Southeast Asia regions.

North America, especially The United States, will still play an important role which cannot be ignored. Any changes from United States might affect the development trend of ROADM WSS Component.

Europe also play important roles in global market, with market size of xx million USD in 2017 and will be xx million USD in 2023, with a CAGR of xx%.
