Abstracts

According to our (Global Info Research) latest study, the global ROADM WSS Component market size was valued at USD 830 million in 2023 and is forecast to a readjusted size of USD 1545.1 million by 2030 with a CAGR of 9.3% during review period.

ROADM networks inability to maintain a typical noise shape result in inaccurate optical signal-to-noise ratio (OSNR) measurements. ROADM WSS components are widely classified into Blocker-based, Edge, PLC-based, and Wavelength Selective Switches (WSS).

The key factor contributing to growth of ROADM WSS component market is the growing demand for dynamic ROADMs. Global market is also experiencing an upsurge in the demand for adoption of wavelength selective switches (WSS) enabled ROADMs. However, product cost and quality are some of the major challenges faced by this industry that can hinder its growth rate. Growth of WSS market slowed down during past few months as a result of excessive supply chain inventory; however, this market is expected to resume growth in the near future as a result of surging demand for technologically improved components.

The Global Info Research report includes an overview of the development of the ROADM WSS Component industry chain, the market status of Fiber-Optic Networks (Blocker-Based, PLC-Based), Communication (Blocker-Based, PLC-Based), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of ROADM WSS Component.
