Abstracts

The global Robot-Assisted Joint Replacement Surgery market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

The market for robotic orthopedic surgery is witnessing significant growth, driven by advancements in robotic technology and a growing demand for minimally invasive surgical procedures in orthopedics. Robotic systems, such as robotic-assisted surgical platforms, offer enhanced precision, control, and visualization for orthopedic procedures, contributing to improved patient outcomes and faster recovery times. The market is characterized by the adoption of robotic systems in joint replacement surgeries, spine surgery, and trauma procedures. As the technology continues to evolve, future developments are expected to focus on expanding the range of orthopedic procedures that can benefit from robotic assistance, refining robotic interfaces and instrumentation, and incorporating artificial intelligence for real-time decision support during surgeries. The increasing aging population and rising prevalence of orthopedic conditions are anticipated to drive sustained growth in the market, with a continued emphasis on improving surgical accuracy and patient satisfaction.

Robot-assisted joint replacement surgery is an advanced medical procedure that combines robotic technology with orthopedic surgery to enhance precision and outcomes in joint replacement procedures. Typically used for knee and hip replacements, this surgical approach involves a robotic system working in collaboration with the surgeon. The technology allows for precise preoperative planning, three-dimensional mapping of the patient's anatomy, and real-time adjustments during the surgery. The surgeon controls the robotic system, which assists in tasks like bone

preparation and implant placement, ensuring a higher level of accuracy and alignment. This technology aims to improve the overall success rate of joint replacement surgeries, reduce complications, and facilitate faster recovery for patients undergoing these orthopedic procedures.
