The robot chassis with shock absorption is a chassis system designed for mobile robots. It integrates shock absorption devices (such as springs, hydraulic or pneumatic shock absorbers) to absorb and buffer the vibration and impact generated by uneven ground or during movement. This chassis can improve the stability and operating efficiency of the robot in complex terrain (such as rugged roads, slopes or uneven ground), while protecting the internal precision electronic components from vibration damage. It is widely used in industrial robots, service robots, warehouse logistics robots (such as AGV) and special robots (such as rescue robots).
