According to our (Global Info Research) latest study, the global Robot Frameless Motor market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Frameless motor is a new type of torque motor designed specifically for applications with small volume, light weight, low inertia, compact structure, and high power requirements; By adopting electromagnetic design optimization technology, the torque density is increased while reducing the motor tooth slot effect, resulting in smoother operation. The product appearance and lifespan are improved through the use of adhesive packaging technology to cope with different complex working conditions. The frameless motor is considered the core component of robot joints. In addition to its applications in this field, Edess frameless motors are also used in precision instruments with high precision requirements and semiconductor production equipment with high stability requirements. The frameless motor developed by Edes has advantages in lightweight, high power, high precision, high stability, and other aspects.
