Abstracts

Robot reduction gear bearings are special bearings used in robot reduction gears. Bearings are one of the core components in reduction gears. According to different types of reduction gears, bearings can be divided into harmonic reduction gear bearings, planetary reduction gear bearings and RV reduction gear bearings. Harmonic reduction gear bearings include crossed roller bearings and flexible bearings; RV reduction gears use three types of bearings: needle roller bearings, tapered bearings, and angular contact ball bearings; planetary reduction gears use ball bearings and needle roller bearings.

According to our (Global Info Research) latest study, the global Robot Reduction Gear Bearing market size was valued at US\$ million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of %during review period.
