## Abstracts

According to our (Global Info Research) latest study, the global Robot Servo Drive market size was valued at US\$ 1859 million in 2024 and is forecast to a readjusted size of USD 4570 million by 2031 with a CAGR of 13.9% during review period.

The servo system consists of three parts: servo driver, servo motor and encoder. The servo driver decomposes the information received from the controller into commands that can be executed by a single degree of freedom system, and then transmits it to the servo motor; The servo motor converts the received current signal into torque and speed to drive the control object; the encoder, as the feedback device of the servo system, determines the accuracy of the servo system to a large extent. With the rapid expansion of industries such as industrial robots and electronic manufacturing equipment, the overall market demand for servo systems has maintained a growth trend.
