Abstracts

The global Robot Wrappers market size is expected to reach \$ 488 million by 2032, rising at a market growth of 4.7% CAGR during the forecast period (2026-2032).

Robot Wrappers are packaging machines that move autonomously or semi-autonomously around palletized loads and apply stretch film to stabilize products for storage and transportation. They are mainly used in warehouses, distribution centers, manufacturing plants, food and beverage facilities, building material factories and logistics operations where pallet sizes vary or where moving heavy and unstable loads to a fixed turntable wrapper is inefficient. In 2025, Global Robot Wrappers sales are estimated at about 22 k units, with an average ex-works price of around 16,000 US\$/Unit.

The robot wrapper value chain consists of upstream motors, drives, PLC/controllers, sensors, batteries, chargers, pre-stretch film carriages, wheels, frames and safety components; midstream manufacturers of mobile robotic stretch wrapping machines; and downstream users in food and beverage, consumer goods, building materials, chemicals, appliances, warehousing, e-commerce fulfillment and third-party logistics.

The robot wrapper market is mainly driven by logistics automation, rising labor costs, increasing pallet-load diversity and stricter requirements for transport safety. Compared with fixed turntable stretch wrappers, mobile robotic wrappers do not need to rotate the load, making them suitable for oversized, heavy, unstable or irregular pallets. They are particularly attractive in high-mix, multi-station warehouses and manufacturing sites where moving loads to a fixed wrapping station is inefficient.

This report studies the global Robot Wrappers production, demand, key manufacturers,
