## Abstracts

According to our (Global Info Research) latest study, the global Robotic Dog market size was valued at US\$ 271 million in 2025 and is forecast to a readjusted size of US\$ 776 million by 2032 with a CAGR of 17.5% during review period.

A quadruped robot, also known as a bio-inspired quadruped robot (robotic dog), is a small-sized, multi-degree-of-freedom mobile robot designed to mimic the movement patterns and limb structures of canines (or other quadrupedal animals). As a subcategory of mobile robots, it relies on the synergy of power transmission, perception and control, and energy systems to achieve autonomous movement in complex terrain, environmental interaction, and execution of specific tasks.

From the perspective of the industrialization process, quadruped robots (also known as 'robotic dogs') are gradually evolving into specialized mobile platforms capable of commercially scalable delivery. Their demand is primarily driven by three types of scenarios: first, high-frequency inspection and asset management (covering energy, chemical, power, park and factory premises); second, security/emergency response and complex terrain operations (including rescue, border/military police services, mining and tunneling); third, research, education and developer ecosystems. The sustained growth in the overall sales volume of service robots has laid a broader demand foundation for this track?according to data disclosed by the International Federation of Robotics (IFR), the sales volume of professional service robots reached nearly 200,000 units in 2024, representing a year-on-year growth of approximately 9%.

In terms of the competitive landscape, international players are represented by Boston Dynamics (Spot) and ANYbotics (ANYmal), with a primary focus on industrial inspection. For instance, Spot is explicitly positioned as an industrial inspection

platform. Among relevant sub-markets, explosion hazard zones in the chemical and oil & gas sectors are among those with the highest commercialization barriers. ANYmal X has entered this niche by obtaining certifications such as ATEX/IECEX Zone 1, demonstrating that compliance and safety have become key differentiated barriers. Domestically in China, Unitree Robotics and Welkin Robotics are the leading enterprises, accounting for over 78% of China's market share in 2025.
