Robotic Image Transmission Equipment is a type of industrial image Equipment that can handle and manipulate images or image-related data in various applications. For example, a robotic image transfer equipment can capture images from a camera, process them with computer vision algorithms, and send them to a display or a storage device. Alternatively, a robotic image transfer equipment can also receive images from a network or a storage device, and transfer them to another device or location. Robotic image transfer equipment can be used for tasks such as inspection, quality control, surveillance, entertainment, education, and research.
