According to our (Global Info Research) latest study, the global Robotic Pets for Seniors market size was valued at US\$ 772 million in 2025 and is forecast to a readjusted size of US\$ 2747 million by 2032 with a CAGR of 19.8% during review period.

In 2025, global Robotic Pets for Senior output reached about 250,000 units and global capacity of around 450,000 units. The average price is about USD 3,000 per unit, with gross margins near 34%. Robotic pets for seniors are interactive companion robots designed to provide emotional support, cognitive stimulation, and social engagement for elderly users?especially those living alone or with conditions such as dementia or limited mobility?by mimicking the behaviors of real animals (e.g., cats, dogs, or seals) through sensors, AI-driven responses, touch interaction, and sound. The supply chain of robotic pets for seniors begins upstream with core components such as microcontrollers and AI chips, sensors (touch, motion, temperature), actuators (motors for movement), batteries, soft robotics materials (fur fabrics, silicone skins), and embedded software/voice modules supplied by semiconductor and electronics companies; midstream involves OEM/ODM manufacturers and robotics firms that integrate hardware, develop behavior algorithms, and assemble the finished products; and downstream includes distributors, healthcare equipment suppliers, e-commerce platforms, senior care institutions, hospitals, and rehabilitation centers, where the products are marketed either as assistive healthcare devices or consumer wellness products, often supported by after-sales services, software updates, and customization for therapeutic use.
